Data Terminal Systems SERIES 400

The DTS Series 400

The Series 400 is the most powerful stand-alone electronic cash register on the market today, offering many new and advanced control features. Designed for fast food and fine food restaurants, as well as many retail store operations, the Series 400 is available now in two models. The basic Series 400 system offers up to 44 programmable totals and presets, while the expanded system offers up to 236 totals and presets, as well as price look-up capability for as many as 230 items.

Advanced features never before available on an ECR

Receipt and Slip Printer prints all dollar amounts directly on guest checks as waiters/waitresses ring up orders. Improves accuracy, and eliminates time spent writing and mentally adding up guest checks.

Slip Compulsion register does not operate until a guest check is inserted into printer for increased system control.

Check Trak™ stores information for up to 250 guest checks for better cash control. Allows waiters/waitresses to add drink and food to guest checks as items are ordered, totaling checks instantaneously when customers are ready to pay.

Second Totals Option changes one set of preset prices to another set, automatically. For example, luncheon menu prices may be changed to dinner menu prices, regular drink prices to happy hour prices, or regular store prices to sale prices without reprogramming the register each time prices must be changed. And, with a *Price Exception Key* option cashiers can ring up items from the menu or set of prices not in effect at the time. In addition, you can use a *Price Modifier Key* with or independently of the second totals option to further increase the number of available presets, eliminating the need to have separate keys for the different sizes (i.e., small, medium, and large), or extras (i.e., lettuce, tomato, or cheese), or prices associated with an item.

Series 400 standard features

All Series 400s offer as standard features automatic tax calculations, multiplication, price extension for presets and price look-up, percent and discount calculations, previous balance, balance forward, error correction, and change computation.

Detailed management reports help you track cash and inventories more closely

Grand Total Reports present the day's total sales, taxable sales, tax collected, refunds, and balance forward for quick and easy cashing up and record keeping.

Department Reports itemize sales by department, preset, and price look-up as well as provide units sold counts, allowing you to determine item or department profitability and inventory status quickly and easily. Reports also provide department, preset, and price look-up item sales as a percent of total sales for even more meaningful daily management information.

Media and Clerk Reports track cash and employee productivity, eliminating time-consuming record keeping and manual calculations.

The Series 400 offers the most complete management control system possible with a stand-alone ECR. Comprehensive management reports not only simplify record keeping, but make it easy for you to determine slow moving items, department profitability, optimal reorder quantities, and employee productivity . . . without a lot of pencil pushing.

What's more, the Series 400 provides quicker and more efficient checkouts. By performing all calculations automatically—from tax to price look-up—the Series 400 not only increases customer throughput, but eliminates errors usually resulting from cashier mental calculations, chart consultations, and other manual operations. Consequently, cashiers are friendlier and customers happier.

Whatever your needs, the Series 400 is sure to provide you with the most advanced stand-alone checkout and management control system. The Series 400 is sold and serviced by more than 2,000 Data Terminal Systems' representatives, internationally, and comes with a full one-year warranty on all parts and labor.
